- Generating suggestive order report as and when required.
- Creating Order entry as per the suggestive order report with provision of alteration.
- Linking of order entry with Spare Part Purchase document to maintain the back order and complete order status.

Customer Club and Reward Point Management: Rewards, Special Discounts and other benefits to the customer on the basis of his previous Sales, Service and Purchase Record.

Comparative figures of Target Vs. Achievement : Showing Salesman wise and Territory wise Sales and Recovery status.

Direct / Indirect posting to financial accounting module from other modules: All Finance related entries from Asset, Workshop, Transfers, Sales, Purchase document will be auto or manually posted to Accounts as per customer choice.

Entry searching facility through date, voucher no., amount, narration, etc.: This enable fast searching to modify the document or to locate the error.

Reports on Screen/Printer/File on Date range & on diff. selection criteria's:

All Documents available on Pre-Printed as well as on Plain Stationery.

Online Data Backup & Data Restore utility: Automatic Data Backup system at the start of the Computer or time set by user on daily basis.

Strong security system to protect policy decisions from general user: Multiple Users creation with control on Data Editing days and option for hiding the Confidential Software options from the normal user.

WORKSHOP MANAGEMENT

The workshop management allows a service manager to organize their time and quickly book in new jobs. The system gives the user the flexibility to change any details at the click of a button. At the start of each day the workshop manager can print job cards for all the workshop jobs booked and pending till date. The system can also generate overdue and collection lists. Jobs can act as 'holding' invoices, where parts are booked before finally being invoiced. Job cards can quickly be amended and printed. With this piece of software, a service can be invoiced in seconds, and an Estimate repair can take very little time and effort. It comprises...

ESTIMATING	INVOICING	MANAGEMENT REPORTING
Vehicle Records	PARTS CONTROL	DATA IMPORT
MECHANICAL MODULE	LABOUR & TIME CONTROL	Efficiency calculation

Features of workshop management module

- Warranty and repair work maintenance.
- Vehicle Entry & Job card printing : ADMS will cost and process labor, service, parts and sundry items as you are creating your Jobs Job invoicing.
- Existing customer information is retrieved and recorded instantly and reminders can be produced at will.
- User defined custom and preset reports are included, such as service and repair histories, job profitability etc...
- Detailed customer records are kept automatically. Produce user defined printouts with your own forms or design your own from our stock graphics, logos and fonts, using plain paper, drastically reducing your stationery costs!
- Engine, gearbox and transmissions re-builders include tracking for Performance and Testing Information using our Job Detail module.
- Keep Transmission/Engine ID's and/or Engine type information.
- The service diary enables service manager monitors individual technician's workloads. It allows the user to allocate available courtesy cars, and shows clearly which technicians are free to take on new work.

Spare Part Division will use RebMan for there requirement
